

## WHERE DOES YOUR SUMP PUMP DRAIN?

Inflow and Infiltration (I/I) are terms that are used to describe how stormwater and groundwater make their way into the sewer system. It is a steady contributor to the problem, causing water that should be filtering down and recharging the areas aquifers to end up going through the Wastewater Treatment Plant and eventually flowing down the Fox River.

Inflow is a significant problem because during a major rain, a sump pump can add over 7,000 gallons of clear water to the wastewater system in 24 hours.

Familiarize yourself with your house plumbing system. If you have downspouts that are piped underground, a sump pump that has no identifiable discharge point, or foundation drains that don't discharge to the road side ditch, or other low point on the lot, you may be contributing to the problem. Disconnect unlawful connections to the sewer system. Taking these steps will help the environment and reduce unnecessary treatment costs associated with treating stormwater that enters the sewer system.
